Dual ± 15 Volt Tracking Regulator

The MC1468/1568 is a dual polarity tracking regulator designed to provide balanced positive and negative output voltages at currents to 100 mA. Internally, the device is set for ± 15 V outputs but an external adjustment can be used to change both outputs simultaneously from 8.0 V to 20 V. Input voltages up to ± 30 V can be used and there is provision for adjustable current limiting.

- Internally Set to ± 15 V Tracking Outputs
- Output Currents to 100 mA
- Outputs Balanced to within 1.0% (MC1568)
- Line and Load Regulation of 0.06%
- 1.0% Max Output Variation Due to Temperature Changes
- Standby Current Drain of 3.0 mA
- Externally Adjustable Current Limit
- Remote Sensing Provisions

APPLICATIONS INFORMATION

Compensation capacitors C1 and C2 must be located as close to the device as possible to prevent instability due to noise pickup. Input bypass capacitors C_{in} are required if the device is located more than four inches from the power source filter capacitor. Output capacitor C4 is required for stability of the negative regulator. Capacitor C3 is used to improve the positive regulator load transient response. Low impedance quality capacitors are required when operating the MC1568 at its temperature extremes. Extended range ceramic, tantalum, and electrolytic capacitors are readily available from several manufacturers.

Capacitor values should be determined on a system by system basis. Input lead length, output load, temperature range, and printed circuit board layout are factors that will influence circuit performance. Typical values for capacitors C_{in}, C3, and C4 are 0.1 μF to 10 μF while C1 and C2 are 1500 pF.

The presence of BalAdj, pin 2, on devices housed in the dual in-line package (L suffix) allows the user to adjust the output voltages down to ±8.0 V. The required value of resistor R2 can be calculated from

$$R2 = \frac{R1 R_{int} (\phi + V_Z)}{R_{int} (V_O - \phi - V_Z) - \phi R1}$$

where: R_{int} = An Internal Resistor = R1 = 1.0 kΩ
 φ = 0.68 V
 V_Z = 6.6 V

Some common design values are listed below:

±V _O (V)	R2	T _C V _O (%/°C)	I _B + (mA)
14	1.2 k	0.003	10
12	1.8 k	0.022	7.2
10	3.5 k	0.025	5.0
8.0	∞	0.028	2.6
