

CDP-CX200

SERVICE MANUAL

*US Model
Canadian Model
AEP Model
UK Model
E Model
Australian Model
PX Model*

Model Name Using Similar Mechanism	NEW
CD Mechanism Type	CDM-40
Base Unit Type	KSM-213BKN/M-N
Optical Pick-up Type	KSS-213B/S-N

SPECIFICATIONS

Compact disc player

Laser	Semiconductor laser ($\lambda = 780 \text{ nm}$) Emission duration: continuous
Laser output	Max 44.6 μW * * This output is the value measured at a distance of 200 mm from the objective lens surface on the Optical Pick-up block with 7 mm aperture.
Frequency response	20 Hz to 20 kHz $\pm 0.5 \text{ dB}$
Signal-to-noise ratio	More than 100 dB
Dynamic range	More than 98 dB
Harmonic distortion	Less than 0.0045%
Channel separation	More than 95 dB

Outputs

	Jack type	Maximum output level	Load impedance
LINE OUT	Phono jacks	2 V (at 50 kilohms)	Over 10 kilohms

General

Power requirements

Where purchased	Power requirements
USA, Canada	120V AC, 60Hz
Europe and Singapore	220V - 230V AC, 50Hz
E, PX	110 - 120 V or 220 - 240 V AC, adjustable, 50/60 Hz
Australia	240V AC, 50Hz

Power consumption 13 W

Dimensions (approx.) (w/h/d)
When the front cover is closed
430 $\times$ 200 $\times$ 480 mm (17 $\times$ 7 7/8 $\times$ 19 in.) incl. projecting parts
When the front cover is open
430 $\times$ 200 $\times$ 600 mm (17 $\times$ 7 7/8 $\times$ 23 5/8 in.) incl. projecting parts

Mass (approx.) 9.0 kg (19 lbs 14 oz)

Supplied accessories

Audio cord (2 phono plugs - 2 phono plugs) (1)
CONTROL A1 cord (1) (supplied for Canadian models only)
Remote commander (remote) (1)
Sony SUM-3 (NS) batteries (2)
CD booklet holders (2)
Label (1)

Design and specifications are subject to change without notice.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

Flexible Circuit Board Repairing

- Keep the temperature of soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

The laser component in this product is capable of emitting radiation exceeding the limit for Class 1.

CLASS 1 LASER PRODUCT
LUOKAN 1 LASERLAITE
KLASS 1 LASERAPPARAT

This appliance is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT MARKING is located on the rear exterior.

CAUTION	; INVISIBLE LASER RADIATION WHEN OPEN. AVOID EXPOSURE TO BEAM.
ADVARSEL	; USYNLIG LASERSTRÅLING VED ÅBNING NÅR SIKKERHEDSÅFBRYDERE ER UDE AF FUNKTION. UNDSÅ UDSÆTTELSE FOR STRÅLING.
VARO!	; AVATTAESSA JA SUOJALUKITUS OHITETTAESSA DLET ALTIINNA LASERSATELYLLE.
VARNING	; LASERSTRÅLING NÅR DENNA DEL ÄR ÖPPNAD OCH SPÄRREN ÄR URÖPPPLAD.
ADVARSEL	; USYNLIG LASERSTRÅLING NÅR DEKSEL ÅPNEK UNNGÅ EKSPONERING FOR STRÅLEN.

This caution label is located inside the unit.

For the customers in Canada

CAUTION

TO PREVENT ELECTRIC SHOCK, DO NOT USE THIS POLARIZED AC PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

SECTION 1 SERVICING NOTE

SAFETY CHECK-OUT (US model only)

After correcting the original service problem, perform the following safety checks before releasing the set to the customer: Check the antenna terminals, metal trim, “metallized” knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE

The AC leakage from any exposed metal part to earth Ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers’ instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The “limit” indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

Fig. A. Using an AC voltmeter to check AC leakage.

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts. The flexible board is easily damaged and should be handled with care.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

LASER DIODE AND FOCUS SEARCH OPERATION CHECK

Carry out the “S curve check” in “CD section adjustment” and check that the S curve waveform is output repeatedly.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY MARK $\triangle$ OR DOTTED LINE WITH MARK $\triangle$ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE $\triangle$ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

SECTION 2 GENERAL

LOCATION OF PARTS AND CONTROLS

Front Panel

- 1** POWER button
- 2** CONTINUE button
- 3** Display window
- 4** SHUFFLE button
- 5** PROGRAM button
- 6** REPEAT button
- 7** Front cover
- 8** Remote sensor
- 9** JOG dial
- 10** ENTER button

- 11** CHECK button
- 12** CLEAR button
- 13** ■ (stop) button
- 14** || (pause) button
- 15** ▷ (play) button
- 16** ⏮ AMS* ⏭ button
- 17** OPEN button
- 18** BLOCK 1-8 buttons

* AMS is the abbreviation for Automatic Music Sensor.

When to use the COMMAND MODE selector

The COMMAND MODE selector is set to CDI at the factory for normal use. You can control this player by connecting to a Sony CD Player with the player control function, via the CONTROL A1 jacks. When making this connection, set the COMMAND MODE selectors of each player to the appropriate position according to the connected line input jacks. For details, refer to the instructions supplied with the connected player.

When using another Sony CD player together with this player

You can make the supplied remote effective only for this player.

- When using the player equipped with the COMMAND MODE selector:
Set the COMMAND MODE selector of this player to CDI and that of another player to CD2 or CD3. Then set the CDI/2/3 switch on the remote supplied for each player accordingly.
- When using the player not equipped with the COMMAND MODE selector:
The command mode of the player without the COMMAND MODE selector is set to CDI. Set the COMMAND MODE selector of this player to CD2, and set the CDI/2/3 switch on the remote to CD2.

Setting the VOLTAGE SELECTOR (for E, PX models)

Check that the VOLTAGE SELECTOR on the rear panel of the player is set to the local power line voltage. If not, set the selector to the correct position using a screwdriver, before connecting the AC power cord to a wall outlet.

Inserting CDs

You can insert up to 200 discs into this player.

- 1 Press POWER to turn on the player.
- 2 Press OPEN.

- 3 Turn the JOG dial until you find the disc slot where you want to insert a disc, while checking the disc number (written beside every five slots and also indicated in the display).

The disc number at the loading position appears in the display.* As you turn the JOG dial, the disc number changes.

You can arrange your discs into groups and play them within a certain group using the Block Play function. When using this function, you have to insert discs into the slots assigned to one of the eight groups. For details, see "Playing Discs in a Group" on page 15.

- * If you have already inserted discs, the disc number at the playing position appears. When you turn the JOG dial, the displayed disc number changes to the one at the loading position.

- 4 Insert a disc with the label side facing right.

Notes

- Make sure you have inserted the disc into each slot at a right angle to the rotary table. If the disc is not put in straight, it may damage the player or the disc.
- Make sure the rotary table comes to a complete stop before inserting or removing discs.

- 5 Repeat Steps 3 and 4 to insert more discs.

- 6 Close the front cover by pressing the right edge of the cover until it clicks.

The rotary table turns and the disc slot at the loading position is set to the playing position. Always close the front cover except when you insert or remove discs.

-  The supplied CD booklet holders help you locate a disc.
- You can store up to 200 CD booklets. Insert booklets and stick the number label on the film of a pocket and the booklet so that you can locate the disc easily.

Notes

- When you insert an 8 cm (3-inch) CD, be sure to attach a Sony CSA-8 adaptor (not supplied) to the disc. Do not insert an empty 8 cm (3-inch) CD adaptor (CSA-8). It may damage the player.
- Do not attach anything such as seals or sleeves to CDs. It may damage the player or the disc.
- If you drop a disc into the player and the CD won't go into the slot correctly, consult your nearest Sony dealer.
- When transporting the player, remove all discs from the player.

Removing CDs

After following Steps 1 to 3 of "Inserting CDs" on page 6, remove the discs. Then close the front cover.

Note

The disc being played does not come to the loading position if you open the front cover during playback. (The disc number flashes in the display.)

If you want to remove the disc being played, press ENTER in the center of the JOG dial after opening the front cover. The "disc" comes to the loading position. Remove the disc after the rotary table comes to a complete stop.

Locating a Specific Disc

Selecting a disc on the player

Turn the JOG dial until the disc number you want appears in the display. Press ENTER to start play.

Selecting a disc directly using the remote

- Press DISC.
- Press the number button of the disc.
Example: To enter number 35
Press 3, then 5.
To enter number 100
Press 1, then 0 twice.
- Press ENTER to start play.

Specifying the Next Disc to Play

You can specify the next disc to play while playing a disc in Continuous or 1 DISC Shuffle Play mode.

While playing a disc, turn the JOG dial until the disc number you want appears in the display.

After the current disc is played, the next disc you have specified starts playing.

If you want to skip to the next disc right away, press ENTER while playing the current disc.

To cancel the disc you have specified
Press CONTINUE twice.

Playing Repeatedly

You can play discs/tracks repeatedly in any play mode.

Press REPEAT* while playing a disc. "REPEAT" appears in the display. The player repeats the discs/tracks as follows:

When the disc is played in	The player repeats
ALL DISCS Continuous Play (page 8)	All tracks on all discs
1 DISC Continuous Play (page 8)	All tracks on the current disc
ALL DISCS Shuffle Play (page 12)	The player does not repeat discs/tracks but keeps shuffling until you stop play whether or not you press REPEAT.
1 DISC Shuffle Play (page 12)	All tracks on the current disc in random order
Program Play (page 13)	The same program

To cancel Repeat Play

Press REPEAT repeatedly until "REPEAT" disappears from the display.

Repeating the current track

You can repeat only the current track.

While the track you want is being played, press REPEAT repeatedly until "REPEAT 1" appears in the display.

Playing in Random Order (Shuffle Play)

You can have the player "shuffle" the tracks and play in random order. The player shuffles all the tracks on all discs or on the disc you specified.

- 1 Press SHUFFLE to select ALL DISCS or 1 DISC Shuffle Play mode. Each time you press SHUFFLE, "ALL DISCS" or "1 DISC" appears in the display.

When you select	The player plays
ALL DISCS	All tracks on all discs in random order. The player keeps shuffling tracks until you stop play.*
1 DISC	All tracks on the specific disc in random order
* The player may play the same track more than once.	

- 2 When you want to specify the disc for 1 DISC Shuffle Play, turn the JOG dial until the disc number you want appears in the display.

- 3 Press ENTER or Δ . ALL DISCS or 1 DISC Shuffle Play starts. "[]" appears in the display while the player is "shuffling" the discs or the tracks.

To cancel Shuffle Play

Press CONTINUE.

- 1 You can start Shuffle Play while playing Press SHUFFLE, and Shuffle Play starts from the current track.

- 1 You can directly select a disc for 1 DISC Shuffle Play (page 10). See "Selecting a disc directly using the remote" on page 10.

- 2 You can go to the next disc during 1 DISC Shuffle Play (page 10). Press DISC SKIP +.

- 3 You can specify the next disc to play during 1 DISC Shuffle Play Turn the JOG dial to specify the next disc. After all the tracks on the current disc are played in random order, the next disc starts playing. If you want to skip to the next disc right away, press ENTER while playing the current disc.

- 4 Note You cannot specify the next disc to play during ALL DISCS Shuffle Play.

- 5 To program a whole disc, skip this step. Press Δ until the track number you want appears in the display.

- 6 Press ENTER or PROGRAM.

The track being programmed

The disc being programmed

- 7 To program other discs/tracks, do the following:

To program	Repeat Steps
Other discs	2 and 4
Other tracks on the same disc	3 and 4
Other tracks on other discs	2 to 4

- 8 Press Δ to start Program Play.

To cancel Program Play

Press CONTINUE.

- 9 The program remains even after Program Play ends When you press Δ , you can play the same program again.

When you press PROGRAM during Continuous or Shuffle Play

The program will be played after the current track.

The program remains until you erase them

If you replace discs, the programmed disc and track numbers remain. So, the player plays only the existing disc and track numbers. However, the disc and track numbers that are not found in the player or on the disc are deleted from the program, and the rest of the program is played in the programmed order.

Creating a program on the player

- 1 Press PROGRAM.

If a program is already stored, the last step of the program appears in the display. When you want to erase the whole program, hold down CLEAR until "All Clr" appears in the display (see page 14).

Playing Discs in a Group (Block Play)

You can classify discs in advance by artists, category, etc. when inserting discs into the slots, and play them only within the group (called "block:") you specified. The player has eight blocks, and each slot is assigned to one of the blocks as shown below.

Block number	Disc slot
1	1-25
2	26-50
3	51-75
4	76-100
5	101-125
6	126-150
7	151-175
8	176-200

You can enjoy Continuous, Shuffle or Repeat Play within a certain block.

- 1 Insert discs into the slot of the block you want, referring to the table above. (See also "Inserting Discs" on page 6.)
- 2 Press one of the BLOCK 1-8 buttons to select the block.
When using the remote, press BLOCK, the number button of the block you want, then ENTER.
The block number appears in the display.
- 3 Press Δ .
Block Play starts from the disc which is the most upward number within a block and located closest to the playing position.

You can start Block Play from the disc you want.
When you want to start Block Play from the disc you want, turn the JOG dial to select the disc, then press ENTER.

To cancel Block Play
Press the corresponding BLOCK 1-8 button.

Note
The block number does not appear if no disc is put into the block you specified.

SECTION 3 DISASSEMBLY

Note : Follow the disassembly procedure in the numerical order given.

3-1. FRONT PANEL ASSEMBLY

3-2. BACK PANEL ASSEMBLY

3-3. TABLE ASSEMBLY

3-4. MECHANISM DECK ASSEMBLY

3-5. BASE UNIT ASSEMBLY

SECTION 4 TEST MODE

4-1. Display Check Mode

With the power turned off (standby state), press the POWER button while pressing the **||** (pause) button.

All FL segments and grids light up together with the **▷** (play), **||** (pause), and standby LEDs.

At the same time, the GROUP LEDs are scanned one by one.

Note: To exit this mode, press the POWER button.

4-2. ADJ Mode

1. Turn ON the power of the unit, set disc to disc table, and perform chucking.
2. Disconnect the power supply plug from the outlet.
3. To set ADJ mode, connect the test point (TP301:ADJ) of the MAIN board to Ground, and turn on the power supply plug to the outlet.

The power will turn on automatically, and the first track will be played. In this mode, table rotation and loading operations are not performed because it is taken that the disc has already been chucked.

Note: The same operations are also performed in the following when the test point (TP301:ADJ) is connected to Ground after turning on the power.

- Direct search (movement of sledding motor) is not performed during accessing
- Ignored even when GFS becomes L
- Ignored even when the Q data cannot be read
- Focus gain does not decrease
- Spindle gain does not decrease
- Servo related settings can be set manually and checked (Refer to ADJ Mode Special Functions Table)

ADJ Mode Special Functions Table

(The buttons shown with () function by using the supplied remote commander only)

Button	Function
CONTINUE	Servo average display Displays VC, FE, RF, TE and traverse in hexadecimal numbers
SHUFFLE	Focus bias display Each time this is pressed, the focus bias is switched between 1 and 2 (1) Bias actually set Optimum bias Minimum jitter (2) U:Upper aliasing bias L:Lower aliasing bias
PROGRAM	Auto gain display Displays focus, tracking, sledding in hexadecimal numbers
BLOCK 1 (1)	Increases the focus bias in 8 steps.
BLOCK 2 (2)	Sets the focus bias in the middle of aliasing.
BLOCK 3 (3)	Turns off the tracking and sledding servo
BLOCK 4 (4)	Returns the auto gain to the initial value (30)
BLOCK 5 (5)	Turns off the focus servo
BLOCK 6 (6)	Decreases the focus bias in 8 steps.
BLOCK 7 (7)	Re-adjusts the focus bias
BLOCK 8 (8)	Turns on the tracking and sledding servo
(9)	Switches the focus servo gain between normal and down 08: normal, 0C: down
(10/0)	Sets the focus bias to 0 (no bias) Next, displays the jitter measured at the focus bias set
CHECK	S-curve observation mode
CLEAR	Automatic eccentric measurement The results of measurement is displayed in μm directly.

4-3. Key and Display Check Mode

To set this mode, connect the test point (TP302:AFADJ) on the MAIN board to Ground, and turn on the power supply plug to the outlet.

- All FL segments and grids will light up. (All lit check)
When a button is pressed, the types of buttons pressed until then will be displayed on the left side and the number of the buttons will be displayed on the right side. However, these will not be displayed for the following special buttons.

- (stop) button: FL segment check
(Refer to FL Tube Check Patterns)
- || (pause) button: FL grid check (Refer to FL Tube Check Patterns)
The pause LED also lights up simultaneously.
- ▷ (play) button: All FL segment and grid will light up
The play LED also lights up simultaneously.

FL Tube Check Patterns

Segment check

Grid check

- When the jog dial is rotated to the right, the Block indicators of FL light up in the order of 1→2..8→1.
- When the jog dial is rotated to the left, the Block indicators of FL light up in the order of 8→7..1→8.

- The standby LED lights up when the door switch is shut.

- Abbreviation
FL: Fluorescent Indicator Tube

[MAIN BOARD] — Component Side —

SECTION 5 ADJUSTMENTS

5-1. MECHANICAL ADJUSTMENT

Perform the following steps before carrying out adjustments.

1. Turn ON the power of the unit, set disc to disc table No. 92, and perform chucking.
2. Turn OFF the power.
3. Remove the case.
4. While pressing the STOP button, turn ON the POWER button.
The test mode is set.
5. The POWER button LED starts blinking.
(Test mode)

NOTE 1: The cam will start rotating when the BLOCK 1 or BLOCK 5 button is pressed continuously in the test mode.

NOTE 2: If the power cannot be supplied, the cam can be rotated by rotating the pulley with your finger.

SENSOR ALIGNMENT

If the disc table swings to the left and right just before the disc is chucked, perform the following adjustment.

(2) Check that the lever (stopper) assembly secures the disc table as shown in the figure.

(4) Moving the disc table right and left with a hand after the screw is fixed, the table will move by the play of a disc table. If the LEDs light up alternately, the adjustment will be performed correctly)

(3) Loosen the fixed screw by 60° to 90°, and use a tapering screwdriver to adjust the screw as shown in the figure.

Move the bracket (sensor) with the tapering screwdriver little by little, and fix the fixed at where the play button's LED (green) is switched to the pause button's LED (orange) (or its reverse).

GUIDE (DISC T) ALIGNMENT

(2) Check that the state is as shown in the figure.

HOLDER (DISC A) ALIGNMENT

(1) Rotate the cam and adjust to the position shown in the figure.

(2) Check that the state is as shown in the figure.

(3) After applying screw-lock to the  part, rotate the thrust screw until the holder (Disc A) comes to the center of the disc.

PULLEY AND DISC CENTER HOLE ALIGNMENT

(2) Check that the state is as shown in the figure.

(3) Remove the Magnet assembly.

Loosen the fixed screw by 60° to 90°, and move and adjust the bracket (BU adjustment) up and down using a tapering screwdriver so that the positions of the disc hole and disc pulley become A=B or between A:B=2:1 and 1:2.

MAGNET ASSY ALIGNMENT

(3) Apply screw-lock to the  part after adjusting.

(2) Rotate the adjustment screw until $A=B$ or between $A:B=2:1$ and $1:2$

5-2. ELECTRICAL BLOCK CHECKING

Note:

1. CD Block is basically designed to operate without adjustment. Therefore, check each item in order given.
2. Use YEDS-18 disc (3-702-101-01) unless otherwise indicated.
3. Use an oscilloscope with more than 10MΩ impedance.
4. Clean the object lens by an applicator with neutral detergent when the signal level is low than specified value with the following checks.

S-Curve Check

Procedure :

1. Connect oscilloscope to test point TP (FE 1) on BD board.
2. Connect test point TP301 (ADJ) on MAIN board to ground with lead wire.
3. Turn Power switch on to set the ADJ mode.
4. Put disc (YEDS-18) in and playback. Press the CHECK button.
5. Check the oscilloscope waveform (S-curve) is symmetrical between A and B. And confirm peak to peak level within 3 ± 1 Vp-p.

6. After check, remove the lead wire connected in step 2.
- Note :**
- Try to measure several times to make sure than the ratio of A : B or B : A is more than 10 : 7.
 - Take sweep time as long as possible and light up the brightness to obtain best waveform.

RF Level Check

Procedure :

1. Connect oscilloscope to test point TP (RF) on BD board.
2. Turn Power switch on.
3. Put disc (YEDS-18) in to play the number five track.
4. Confirm that oscilloscope waveform is clear and check RF signal level is correct or not.

Note: A clear RF signal waveform means that the shape “◇” can be clearly distinguished at the center of the waveform.

RF signal waveform

E-F Balance Check

Procedure :

1. Connect oscilloscope to test point TP (TE) on BD board.
2. Connect the test point TP301 (ADJ) on MAIN board to the ground with a lead wire.
3. Turn the Power switch on to set the ADJ mode.
4. Put disc (YEDS-18) in to play the number five track.
5. Press the “BLOCK3” button. (The tracking servo and the sledging servo are turned OFF.)
6. Check the level B of the oscilloscope's waveform and the A (DC voltage) of the center of the Traverse waveform. Confirm the following :
 $A/B \times 100 = \text{less than } \pm 22\%$

Traverse waveform

7. Press the “BLOCK 8” button. (The tracking servo and sledging servo are turned ON.) Confirm the C (DC voltage) is almost equal to the A (DC voltage) is step 6.

8. Disconnect the lead wire of TP301 (ADJ) connected in step 1.

RF PLL Free-run Frequency Check

Procedure :

1. Connect frequency counter to test point TP (PLCK) with lead wire.

2. Turn Power switch on.
3. Put the disc (YEDS-18) in to play the number five track.
Confirm that reading on frequency counter is 4.3218MHz.

Adjustment Location :

[MAIN BOARD] — Component Side —

[BD BOARD] — Side B —

31	FILO	O	Filter output for master PLL
32	FILI	I	Filter input for master PLL
33	PCO	O	Charge-pump output for master PLL
34	CLTV	I	Control voltage input for master VCO
35	AVS1	–	Analog Ground
36	RFAC	I	EFM signal input
37	BIAS	I	Asymmetry circuit constant current input
38	ASYI	I	Asymmetry compare voltage input
39	ASYO	O	EFM full swing output
40	AVD1	–	Analog power supply

• Abbreviation

EFM: Eight to Fourteen Modulation

PLL: Phase Locked Loop

Pin No.	Pin Name	I/O	Function
41	DVDD	–	Digital power supply
42	ASYE	I	Asymmetry circuit ON/OFF (Connected to +5V)
43	PSSL	I	Audio data output mode selection input (Connected to Ground)
44	WDCK	O	48-bit slot D/A interface. Word clock. (Open)
45	LRCK	O	48-bit slot D/A interface. LR clock.
46	DATA	O	DA 16 output when PSSL=1.48-bit slot serial data when PSSL=0
47	BCLK	O	DA 15 output when PSSL=1.48-bit slot data when PSSL=0
48	64DATA	O	DA 14 output when PSSL=1.64-bit slot data when PSSL=0 (Open)
49	64BCLK	O	DA 13 output when PSSL=1.64-bit slot data when PSSL=0 (Open)
50	64LRCK	O	DA 12 output when PSSL=1.64-bit slot data when PSSL=0 (Open)
51	GTOP	O	DA 11 output when PSSL=1.GTOP output when PSSL=0 (Open)
52	XUGF	O	DA 10 output when PSSL=1.XUGF output when PSSL=0 (Open)
53	XPLCK	O	DA 09 output when PSSL=1.XPLCK output when PSSL=0 (Open)
54	GFS	O	DA 08 output when PSSL=1.GFS output when PSSL=0 (Open)
55	PFCK	O	DA 07 output when PSSL=1.RFCK output when PSSL=0 (Open)
56	C2PO	O	DA 06 output when PSSL=1.C2PO output when PSSL=0 (Open)
57	XRAOF	O	DA 05 output when PSSL=1.XRA0F output when PSSL=0 (Open)
58	MNT3	O	DA 04 output when PSSL=1.MNT3 output when PSSL=0 (Open)
59	MNT2	O	DA 03 output when PSSL=1.MNT2 output when PSSL=0 (Open)
60	MNT1	O	DA 02 output when PSSL=1.MNT1 output when PSSL=0 (Open)
61	MNT0	O	DA 01 output when PSSL=1.MNT0 output when PSSL=0 (Open)
62	XTAI	I	X'tal oscillator circuit input
63	XTAO	O	X'tal oscillator circuit output (Open)
64	XTSL	I	X'tal selection input pin (Connected to Ground)
65	DVss	–	Digital Ground
66	FSTI	I	Clock input for digital servo block
67	FSTO	O	2/3 divider output of pins 62, 63
68	FSOF	O	1/4 divider output of pins 62, 63 (Open)
69	C16M	O	16.9344 MHz output (Open)
70	MD2	I	Digital-out ON/OFF control pin (Connected to +5V)
71	DOUT	O	Digital-out output pin (Open)
72	EMPH	O	Playback disc output in emphasis mode (Open)
73	WFCK	O	WFCK output (Open)
74	SCOR	O	Sub-code sync output
75	SBSO	O	Sub-P through Sub-W serial output (Open)
76	EXCK	I	Clock input for SBSO read-out (Connected to Ground via a 10 k Ω)
77	SUBQ	O	Sub-Q 80-bit output
78	SQCK	I	Clock input for SQSO read-out
79	MUTE	I	Muting selection pin
80	SENS	O	SENS output

- Abbreviation
WFCK: Wirte Frame Clock

Pin No.	Pin Name	I/O	Function
81	XRST	I	System reset
82	DIRC	I	Used in 1-track jump mode (Connected to +5v)
83	SCLK	I	SENS serial data read-out clock
84	DFSW	I	Defect selection pin (Connected to Ground)
85	ATSK	I	Input pin for anti-shock (Connected to Ground)
86	DATA	I	Serial data input, supplied from CPU
87	XLAT	I	Latch input, supplied from CPU
88	CLOCK	I	Serial data transfer clock input, supplied from CPU
89	COUT	O	Numbers of track counted signal output (Open)
90	DVDD	–	Digital power supply
91	MIRR	O	Mirror signal output (Open)
92	DFCT	O	Defect signal output (Open)
93	FOK	O	Focus OK output (Open)
94	FSW	O	Output to select spindle motor output filter (Open)
95	MON	O	Output to control ON/OFF of spindle motor (Open)
96	MDP	O	Output to control spindle motor servo
97	MDS	O	Output to control spindle motor servo (Open)
98	LOCK	O	GFS is sampled by 460 Hz. H when GFS is H (Open)
99	SSTP	I	Input signal to detect disc inner most track
100	SFDR	O	Sled drive output

- Abbreviation

GFS: Guard Frame Sync

SECTION 7 EXPLODED VIEWS

NOTE:

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.
- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.

- Abbreviation
CND : Canadian model
G : German model
SP : Singapore model
AUS : Australian model

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

SECTION 8 ELECTRICAL PARTS LIST

BD

Note:

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked “*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- RESISTORS
All resistors are in ohms
METAL: Metal-film resistor
METAL OXIDE: Metal Oxide-film resistor
F : nonflammable

- SEMICONDUCTORS
In each case, u: μ , for example:
uA...: μ A..., uPA...: μ PA..., uPB...: μ PB...,
uPC...: μ PC..., uPD...: μ PD...
- CAPACITORS
uF : μ F
- COILS
uH : μ H
- Abbreviation
CND : Canadian model
G : German model
SP : Singapore model
AUS : Australian model

SUPPLEMENT-1

File this supplement with the service manual.

Subject : AGING MODE

SECTION 4 TEST MODE

AGING MODE

Aging Mode

- Mode which repeatedly changes and plays back discs automatically in the unit.
 - It will repeat aging as long as no errors occur.
 - If an error occurs during aging, it will stop all servos, motors, etc. instantaneously, display the error number, and stop operations. However, the stopping conditions differ according to whether the unit is equipped with the "self-protection function during errors" described later.
- The function serves to maintain the state of the unit when errors occur.

Sequence of Aging Mode

Order of Disc Change

(1 cycle takes 3 minutes)

Microcomputer Version and special Functions of Aging Mode

The operations in the aging mode differ according to the version of the microcomputer used (whether it is old or new.)

The version can be differentiated as follows.

[MAIN Board] –Component Side – IC303

Special Functions in Aging Mode

	Former Type	New Type
Disc setting mode*1	None	Present
Self protection function during errors*2	None (Stops immediately when errors occur)	Present/none (Switchable)
Aging cycle count function *3	None	Present

*1 Disc setting mode:

5 discs are set before setting the aging mode. This mode makes the setting of these discs more easy.

*2 Self protection function during errors:

Function which voluntarily corrects errors which occur during normal operations by retries.

If this function is not provided, all operations will be stopped without retiring. It is suitable for checking errors with low reproducibility.

If this function is provided, and errors can be corrected by retries, aging will be continued without stopping.

*3 Aging cycle count function:

Functions which displays the number of agings carried out on the Fluorescent indicator tube in numbers. One aging cycle consists of five discs.

Aging Method

* The procedure differs according to the type of microcomputer used (whether it is new or old).

In the case of the new type:

1. Change the **COMMAND MODE** switch (S501) on set to **CD1**.
2. Turn ON the power of the unit. Open the front cover.
3. Press the AGING START button of the remote commander for aging mode (J-2501-123-A).
4. When the disc set mode is set, the $\triangleright$ and $\blacksquare$ LEDs blink.
5. Rotate the JOG dial. The slits (No. 40, 80, 120, 160, 200) for setting the discs will come forward. Insert the discs into these slits. Do not set the discs in other slits.
6. Set whether the self-protection function during errors is equipped with the unit. Press the REPEAT button. If "REPEAT" is displayed on the Fluorescent indicator tube, it means the function is provided. If "REPEAT" is not displayed, it means the function is not provided.
7. Press the $\triangleright$ button.
8. The $\triangleright$ LED blinks, the aging mode is set, and aging is started.
9. The aging cycle lasts 3 minutes. If errors occur during aging, the error number will be displayed on the Fluorescent indicator tube. (Refer to the following table for the details of the errors.)
10. Aging will be repeated as long as no errors occur.
11. After each aging cycle, the number displayed on the Fluorescent indicator tube will increase.
12. To end aging, press the POWER button

In the case of the Former type:

1. Change the **COMMAND MODE** switch (S501) on set to **CD1**.
2. Set the disc to No. 40, 80, 120, 160, 200. Do not set to other numbers.
3. Press the AGING START button of the remote commander for aging mode (J-2501-123-A).
4. The $\triangleright$ LED blinks, the aging mode is set, and aging is started.
5. The aging cycle lasts 3 minutes. If errors occur during aging, the error number will be displayed on the Fluorescent indicator tube.
6. Aging will be repeated as long as no errors occur.
7. To end aging, press the POWER button.

Error Display

Note) The error codes for the former type are displayed in hexadecimal digits.

Refer to the conversion table.

Hexadecimal→Decimal Conversion Table

Hexa-decimal	Deci-mal	Hexa-decimal	Deci-mal	Hexa-decimal	Deci-mal	Hexa-decimal	Deci-mal
01	01	15	21	1F	31	29	41
02	02	16	22	20	32	2A	42
03	03	17	23	21	33	2B	43
04	04	18	24	22	34	2C	44
05	05	19	25	23	35	2D	45
06	06	1A	26	24	36	2E	46
		1B	27	25	37	2F	47

Error code

Code number	Name	Contents
Err 01	DISC sensor check 1	No disc in the specified slit
Err 02	DISC sensor check 2	Disc in other slits
Err 03	Table operation check 1	Table motor current over
Err 04	Table operation check 2	No table sensor input
Err 05	Loading operation check 1	Load in timeover
Err 06	Loading operation check 2	Load out timeover
Err *1	BU related check 1	Access timeover
Err *2	BU related check 2	High speed search NG
Err *3	BU related check 3	Q data read error
Err *4	BU related check 4	BU operation (from focus search to until signal can be read) timeover
Err *5	BU related check 5	GFS monitor error
Err *6	BU related check 6	Focus cannot be imposed by focus search
Err *7	BU related check 7	Auto focus bias adjustment cannot be performed

The * numbers mean the following according to the state of the unit during aging

2 : From chucking to end of TOC read

3 : From end of TOC read to end of last track playback

4 : From end of last track playback to end of first track playback

CDP-CX200

3. DISC SENSOR ADJUSTMENT

The adjusting volume RV301 is added instead of R308 on the MAIN BOARD in the middle of producing. Perform this adjustment for a set which has RV301.

Disc Sensor Adjustment

Perform this adjustment after completing all adjustments of the mechanism section.

If not performed accurately, the presence of the disc may not be detected properly.

Connection 1:

Waveform 1:

Connection 2:

Waveform 2

Procedure:

1. Connect the oscilloscope to Pins ①, ②, and ④ of CN305 of the MAIN board. Also connect a 1 kΩ resistor to Pin ④ at the same time. (Connection 1)
2. Disconnect the CN308 (2P) and CN306 (2P) cables of the MAIN board. Connect the cables connected to CN306 (connected to the T. MOTOR board) to CN308.

3. Open the front cover. (If closed, malfunctions by incorrect operations may result.)
4. Check that no discs are loaded in the unit, and press the POWER button to turn ON the power.
5. The rotary table will continue rotating in the clockwise direction.
6. Observe the waveform at that time on the oscilloscope.
7. Loosen the screw securing the LUMINOUS board slightly.
8. Slide the LUMINOUS board to the left and right so that the peak of the D0 waveform is at the center between the descending point of the T1 waveform and ascending point of the T2 waveform. (Waveform 1) After adjusting, apply locking compound.

9. Disconnect the resistor connected to Pin ④ of CN305 of the MAIN board. (Connection 2)
10. Observe the waveform on the oscilloscope. (Waveform 2)
11. Adjust RV301 of the MAIN board so that the waveform on the oscilloscope satisfies the following adjustment value 1.
12. Connect the connectors disconnected in Step 2 at their original positions.
13. Close the front cover, and rotate the JOG dial in the counterclockwise direction continuously so that the rotary table rotates continuously in the counterclockwise direction.
14. Observe the waveform on the oscilloscope and confirm that it satisfies the adjustment value 2 (waveform 3). If it does not, adjust RV301 of the MAIN board.

Waveform 3:

15. After the adjustment, load a disc only in slit 1, close the front cover, and press the POWER button to turn off the power.
16. Press the POWER button while pressing the ENTER button to turn on the power.
17. If the rotary table makes one round, and "YES" is displayed on the fluorescent indicator tube after it stops, it means that the adjustment has been performed properly.

Adjustment value 1:

At the shoulder part of waveform D1, T1 becomes H and T2 becomes L, and at the same time, the Y width must not be smaller than 1/4 of the Z width.

In order to satisfy this value more easily, adjust so that X=Y approximately and observe the deviation of the waveform.

Adjustment value 2:

At the shoulder part of waveform D1, T1 becomes H and T2 becomes L, and at the same time, the Y width must not be smaller than 1/4 of the Z width.

Adjustment Location:

[MAIN BOARD] — Component Side —

ELECTRICAL PARTS LIST

Note:

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- RESISTORS
All resistors are in ohms
METAL: Metal-film resistor
METAL OXIDE: Metal Oxide-film resistor
F : nonflammable

- SEMICONDUCTORS
In each case, u: μ , for example:
uA...: μ A..., uPA...: μ PA..., uPB...: μ PB..., uPC...: μ PC..., uPD...: μ PD...
- CAPACITORS
uF : μ F
- COILS
uH : μ H
