

ST-D777ES

SERVICE MANUAL

AEP Model
UK Model

SPECIFICATIONS

DAB tuner section

Frequency range	174.928 (5A) - 239.200 (13F) MHz 1452.960 (L1) - 1490.624 (L23) MHz
Sensitivity	6.9 μ V/28 dBf
Signal-to-noise ratio	100 dB
THD+N	0.005 % (1 kHz)
Channel separation	90 dB (1 kHz)
Selectivity	35 dB (at adjacent channel)
Frequency response	+0.2/-0.3 dB (5 Hz - 20 kHz)
DA converter	Pulse D/A S-TACT128
Digital filter	VC24 (only for DAB analog output)
Digital output	Terminals: Coaxial and Optical Sampling frequency: 48 kHz
RDI output	Optical
Aerial terminal	75 Ω , F female

FM tuner section

Frequency range	87.5 - 108.0 MHz
Sensitivity	at 40 kHz derivation at 26 dB quieting (mono) 0.9 μ V/10.3 dBf at 46 dB quieting (stereo) 23 μ V/38.5 dBf
Signal-to-noise ratio	at 40 kHz derivation 80 dB (mono), 76 dB (stereo)
THD+N	1 kHz, 40 kHz derivation WIDE 0.035 % (mono), 0.045 % (stereo)
Channel separation	50 dB (1 kHz) WIDE
Selectivity	at 400 kHz WIDE 85 dB NARROW 90 dB
Frequency response	+0.2/-0.3 dB (30 Hz - 15 kHz)
Aerial terminal	75 Ω , IEC male

AM tuner section

Frequency range	MW: 522 - 1,611 kHz (9 kHz step) LW: 144 - 288 kHz (1 kHz step: Manual tuning) (3 kHz step: Automatic tuning)
Sensitivity	(with AM loop aerial) MW: 200 μ V/m LW: 700 μ V/m
Signal-to-noise ratio	MW: 54 dB (50 mV/m, 999 kHz) LW: 50 dB (50 mV/m, 216 kHz)
Harmonic distortion	0.3 %
Sensitivity	50 dB
Aerial terminal	Push lever

General

Power requirements	230 V, AC 50/60 Hz
Power consumption	20 W
Dimensions	430 $\times$ 97.5 $\times$ 374 mm (w/h/d)
Weight	6.2 kg
Remote control capability	IR
Station preset capacity	max. 99 (DAB, FM and AM total)
Supplied accessories	• Audio cord (1) • AM loop aerial (1) • FM wire aerial (1) • DAB wire aerial (1) • Remote commander (1) • R6 (size AA) batteries (2)

Design and specifications are subject to change without notice.

SERVICE POSITION

- The service position of the MAIN board is the state in which the back-panel is removed and the MAIN board is swing-raised by 90 °.
(An insulating material is necessary to prevent the machine from shorting.)

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK $\triangle$ OR DOTTED LINE WITH MARK $\triangle$ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1 GENERAL

FRONT PANEL

- 1** I/Power switch
- 2** DAB button
- 3** FM button
- 4** AM button
- 5** TUNING MODE button
- 6** PTY button
- 7** TUNING/SELECT button
- 8** MENU button

- 3** DAB DIGITAL OUT OPTICAL jack
- 4** ANTENNA DAB jack
- 5** ANTENNA FM jack
- 6** ANTENNA AM terminal
- 7** ANALOG OUT jack
- 8** POWER cord

Unpacking

Check that you received the following items with the tuner.

- Audio cord (1)
- AM loop aerial (1)
- FM wire aerial (1)
- DAB wire aerial (1)
- Remote commander (1)
- R6 (size AA) batteries (2)

Inserting batteries into the remote

You can control this unit using the supplied remote. Insert two R6 (size AA) batteries by matching the + and – on the batteries. When using the remote, point it at the remote sensor  on this unit.

When replace batteries

With normal use, the batteries should last for about six months. When the remote no longer operates the tuner, replace all the batteries with new ones.

Notes

- Do not leave the remote in an extremely hot or humid place.
- Do not drop any foreign object into the remote casing, particularly when replacing the batteries.
- Do not expose the remote sensor to direct sunlight or lighting apparatuses. Doing so may cause a malfunction.
- If you will not use the remote for an extended period of time, remove the batteries to avoid possible damage from battery leakage and corrosion.

Hooking Up the System

Before you get started

- Turn off the power to all components before making any connections.
- Do not connect the mains lead until all of the connections are completed.
- Be sure to make connections firmly to avoid hum and noise.
- When connecting an audio cord, be sure to match the colour-coded pins to the appropriate jacks: White (left) to White; and Red (right) to Red.

AM aerial hookups

This section describes how to connect the supplied AM loop aerial. For the specific location of the AM ANTENNA terminals, see the illustration below.

What will I need?

- AM loop aerial (supplied) (1)

- 1 Unwrap 2 lengths of the braided lead wire from around the frame of the aerial. Be careful to unwrap only the braided section of the lead wire. Do not unwrap more than 2 lengths of the lead wire. Also, be careful not to unbraids the lead wire.

- 2 Assemble the supplied aerial as shown below.

- 3 Connect the AM loop aerial to the AM terminals on the back of this unit.

- 4 Adjust the aerial direction for the best reception. The AM loop aerial has a directivity which detects the signal from some angles more strongly than others. Set the aerial to the orientation which provides the best receiving condition.

If a high pitched noise (beat noise) occurs when recording AM broadcasts, adjust the position of the AM loop aerial so that the noise disappears. If you live in a building constructed of reinforced concrete, or with a steel frame, you may not be able to achieve good reception since the radio waves become weaker indoors. In this case, we recommend connecting an optional aerial.

For stations that are difficult to receive

Try repositioning the loop aerial while tuning. Placing the supplied AM loop aerial near a window will help improve reception quality.

FM aerial hookups

With an FM outdoor aerial, you can obtain a higher FM broadcast sound quality. We recommend that you use the supplied FM wire aerial only temporarily until you install an FM outdoor aerial. For the specific location of the FM ANTENNA terminal, see the illustration below.

What will I need?

- FM wire aerial (supplied) (1)

- FM outdoor aerial (not supplied) (1) and 75-ohm coaxial cable with IEC female type connector (not supplied) (1)

Connect the supplied FM wire aerial or an FM outdoor aerial (not supplied) to the FM terminal on the back of this unit.

FM outdoor aerial

DAB aerial hookups

With an DAB outdoor aerial, you can obtain a higher DAB broadcast sound quality. We recommend that you use the supplied DAB wire aerial only temporarily until you install an DAB outdoor aerial. For the specific location of the DAB ANTENNA terminal, see the illustration below.

What will I need?

- DAB wire aerial (supplied) (1)
- DAB outdoor aerial (not supplied) (1) and 75-ohm coaxial cable with F male type connector (not supplied) (1)

Connect the supplied DAB wire aerial or an DAB outdoor aerial (not supplied) to the DAB terminal on the back of this unit.

to DAB outdoor aerial

Connecting a ground wire

If you connect an outdoor aerial, be sure to connect a earth lead (not supplied) to the AM ANTENNA terminal with "H" indication (in addition to the AM loop aerial) for lightning protection.

Amplifier hookups

Connect the tuner to an amplifier. Be sure to turn off both components before connection. For the specific location of the terminals, see the illustration below.

ANALOG OUT

What cables will I need?

- Audio cord (supplied) (1)

Connect the white plugs to the white (L) jacks and the red plugs to the red (R) jacks. Insert the plugs completely into the jacks; incomplete connections may cause noise.

MD/DAT Hookups

This section describes how to connect the tuner to a DAT deck or MD recorder for digital-to-digital recording. With this connection, you can obtain the highest possible sound quality when recording DAB digital broadcasts, even if you use the analog outputs for listening purposes. For specific locations of the jacks, see the illustration below.

DAB DIGITAL OUT

What cables will I need?

- Digital optical cable (not supplied) (1)
- Digital coaxial cable (not supplied) (1)

Digital Optical

Digital Coaxial

Notes

- When you use MD recorders which do not support to input the 48kHz digital audio signal, you cannot record the digital signals from the DIGITAL OUT jacks.
- The OPTICAL jack has retractable cover. Insert the plug into the jack.

Mains lead hookup

Connect the mains lead to a wall outlet after completing all of the previous connections.

Selecting the German Display

You can select either an English or a German language display. The factory preset language is English. To change the display to German, follow the steps below.

- 1 Press POWER to turn on the tuner.
- 2 Press MENU.
- 3 Turn TUNING/SELECT so that "DISPLAY LANGUAGE" to German" appears.
- 4 Press ENTER.

"Deutsch gewählt" appears in the display.

To return to the English display

Select "AUSGABE SPRACHE English?" in step 3 above. Then press ENTER in step 4, "English Selected" appears in the display.

Storing DAB/FM Stations Automatically (Auto-betel Select)

With Auto-betel Select you can automatically store up to a combined total of 99 DAB and FM stations. At the same time, stations are stored in alphabetical order for each broadcast band without redundancy.

Additionally, Auto-betel Select only stores the stations with the clearest signals. If you want to store DAB, FM or AM (MW and LW) stations one by one, see "Receiving Broadcasts" on page 10 and "Storing Stations Manually" on page 11.

- Before you begin, make sure you have:
- connected DAB, FM and AM aerials to the tuner as indicated on pages 4 and 5.

- 1 Tune down the volume on the amplifier, then turn on the amplifier and select the TUNER mode.
- 2 Press **POWER** to turn on the tuner.
- 3 Press **MENU**.
- 4 Turn **TUNING/SELECT** so that "AUTO-BETICAL Audio Only" appears.

- 5 Press **ENTER**.
The tuner scans all the DAB and FM stations in the broadcast area.
While scanning, "Now AUTO-BETICAL" appears in the display.

For DAB and FM RDS stations, the tuner first checks for stations broadcasting the same programme, then stores only the one with the clearest signal. The selected DAB and FM RDS stations are sorted alphabetically by their Programme Service name, then assigned a number from 1 for each broadcast band. For more details on DAB and FM RDS, see page 10 (DAB) and 14 (FM RDS).

Regular FM stations are also assigned preset numbers and stored after the FM RDS stations. You can store up to a combined total of 99 stations in all broadcast band.
When scanning finishes, "AUTO-BETICAL End" flashes in the display.

Receiving Preset Stations

This section shows you how to receive preset stations.

- 1 Make sure you've hooked up the tuner and preset stations. (See pages 4 - 6 for hookups and page 6 or 11 for presetting.)
- 2 Tune down the volume on the amplifier, then turn on the amplifier and select the TUNER mode.
- 3 Press **POWER** to turn on the tuner.
- 4 Press DAB, FM or AM for the desired type of broadcast.
- 5 Press **TUNING MODE** repeatedly so that "PRESET" appears in the display.

6 Turn TUNING/SELECT.

Each time you turn **TUNING/SELECT**, a preset station is received and the settings (preset number, frequency, and station name, etc.) appear in the display.

- 7 Adjust the volume of the amplifier.

To check the preset station by using the remote

Select the desired broadcast band by pressing the corresponding buttons on the remote, then specify the desired preset number using the number button on the remote.

You can also switch the next/previous preset number by pressing **PRESET +/-** instead of specifying the preset number directly.

To tune in a non-preset station
See "Receiving Broadcasts" on page 9.

Listening a secondary component of the DAB programme

When "SC" appears in the display while listening a DAB programme, the secondary component is contained in the current service.

Press **MONO/SC** so that the desired secondary component is received. You can also use the remote for this operation.

Notes

- When you tune the DAB broadcast, do not tune up the volume on the amplifier too loud. Since the DAB broadcast has a wide dynamic range, a loud sound will affect your ears or cause the amplifier or speakers to be damaged.
- When you tune the DAB broadcast and change the station, it may take a few second.

When you directly specify a preset station numbered over 10

Press >10 first, then the corresponding number buttons.

To enter "0," use button $^{10}/0$.
Example: To tune the preset number 30
Press >10 first, then 3 and $^{10}/0$.

Overview of DAB

DAB (Digital Audio Broadcasting) is a new multimedia broadcasting system that transmits audio programmes with a quality which is comparable from the current AM broadcasts to that of CDs.

Each DAB station multiplex radio programmes (services) into an **ensemble** which it then broadcasts. Each service contains one or more **components**. All services and components are identified by name, so you can access any of them without having to know their frequencies.

Furthermore, additional information (called programme associated data) can be broadcast along with the services in the form of text.

Notes

- The status of the DAB broadcast depends on your country or region. It may be not broadcasted or may be in the test phase.
- DAB programmes are broadcast in Band-III (174 to 240 MHz) and/or L-Band (1,452 to 1,491 MHz), with each band divided into channels (41 in Band-III and 23 in L-Band). These channels have its own channel label. For details of the channel label and its frequency, see the list in the page 20. One ensemble is broadcast per channel by each DAB station.

Receiving Broadcasts

Receiving broadcasts by scanning stations (Automatic Tuning)

With automatic tuning you can quickly tune in a station without having to know its frequency.

- Press DAB, FM or AM for the desired type of broadcast.
- Press TUNING MODE so that "AUTO" appears in the display.
- Turn TUNING/SELECT slightly and release it when the frequency numbers start changing. Turn the control to the right for a higher frequency; turn it to the left for a lower frequency. When the tuner locates a station, it stops automatically. "TUNED" appears in the display.
- Repeat step 3 until you tune in the appropriate station. To store the station, operate steps 4 to 5 in the "Storing Stations Manually" on this page 11.

Note

When you tune the DAB broadcast and change the station, it may take a few second.

If you cannot tune in the station you want (Manual Tuning)

With manual tuning you can search through all stations broadcasting on each band, and tune in stations with extremely weak signals that you might not be able to receive with automatic tuning.

- Press DAB, FM or AM for the desired type of broadcast.
- Press TUNING MODE so that neither "AUTO" nor "PRESET" appear in the display.
- Turn TUNING/SELECT until you tune in the station you want. Turn the control to the right for a higher frequency; turn it to the left for a lower frequency.

Listening to a secondary component of the DAB programme

When "SC" appears in the display while listening to a DAB programme, a secondary component is contained in the current service. Press MONO/SC so that the desired secondary component is received.

Display window while receiving the secondary component (automatic/manual tuning mode)

Indicates the secondary service. While receiving the primary service, "p" appears.

When you receive the secondary component in the preset tuning mode, the secondary service label appears in the display window.

Storing Stations Manually

This section shows you how to store up to 99 of your favorite DAB, FM or AM (MW and LW) stations manually onto preset numbers.

You can assign the preset number to the desired station from 1 for each broadcast band (DAB, FM and AM) up to a combined total of 99 stored stations.

- Press DAB, FM or AM for the desired type of broadcast.
- Press TUNING MODE repeatedly so that the tuner is set to automatic or manual tuning mode.
- Turn TUNING/SELECT to tune in the station you want to store.
- Press MEMORY. "MEMORY" appears along with the lowest vacant number to indicate that the tuner is ready to store the station.
- Press ENTER. The tuner stores the station at the preset number.
- Repeat steps 1 through 5 to store other stations.

If you want to preset the station to an already assigned number

Turn TUNING/SELECT so that the desired number appears after performing step 4 above. In this case, the previously preset station is replaced with the new one.

DAB and RDS Station names are stored automatically

When you preset a DAB or RDS station that is broadcasting station name information, the station name is automatically stored at the station preset.

If you want to label the stations

Follow the procedure described in "Naming the Preset Stations" on page 12.

When you tune in AM (MW and LW) stations

Adjust the direction of the AM loop aerial for optimum reception.

If the STEREO indicator remains off

Press MONO/SC when an FM stereo broadcast is received.

When you preset a FM station, ANTENNA ATTENUAT, IF BAND WIDTH and FM mode settings are stored simultaneously

If you want to store other settings, change settings according to the procedures in "Tips for Better FM Reception" on page 18 after performing step 3, then perform step 4.

When you want to change the settings for the preset station, tune the station and change the setting. Then, press MEMORY and ENTER.

Note

You cannot preset the secondary component (SC) of a DAB broadcast. Store the service which contains the desired component, then switch the component by pressing MONO/SC when you want to receive the component.

Naming the Preset Stations

You can assign a name of up to 16 characters long to each preset station except DAB and FM RDS stations. When the station is tuned in, the station name will appear.

- 1 Tune in the preset station you want to name.
- 2 Press CHARACTER.
The cursor flashes in the display.
- 3 Turn TUNING/SELECT to select a character.
- 4 When the character you want appears, press CHARACTER to move the cursor into position for the next character.

If you make a mistake

Press CHARACTER repeatedly until the character you want to change flashes (every time you press CHARACTER, the next character flashes). Then turn TUNING/SELECT to select a new character.

- 5 Repeat steps 2 and 3 until the station name you want appears in the display.

- 6 Press MEMORY.

"MEMORY" appears along with the preset number.

- 7 Press ENTER.

"PRESET Memory OK" appears.

When you name the station by Automatic tuning or Manual tuning

After the step 6 above, "MEMORY" appears along with the lowest vacant number to indicate that the tuner stores the station.

Note

- The display returns to normal display mode if you stop assigning names for more than 60 seconds. If this happens, start again from the beginning.
- If you name a station which has a preset name already, the previous preset name is deleted.
- "No Name" appears when you display a preset station without the preset name.
- You cannot use " " (blank space) only for the preset name.

Organizing the Preset Stations

This tuner makes it easy to arrange preset stations in the order you prefer. You can arrange all the preset stations automatically, according to alphabetical order, or you can use the Move and Erase functions to move and erase specific preset stations.

- 1 Press DAB, FM or AM for the desired type of broadcast.
- 2 Press MENU.
- 3 Turn TUNING/SELECT to select one of the following sorting methods:

Select	To
MOVE PRESET	change the location of a specific preset (see this page).
ERASE PRESET	erase a specific preset (see this page).
ALPHABETICAL PRESET SORT	sort all preset stations in alphabetical order in every broadcast band, according to their preset names. Stations without preset names are arranged by frequency, from low to high. DAB stations are arranged by ensemble frequency from low to high. In the ensemble, each service and component is arranged alphabetically, by preset name.

- 3 Press ENTER.

The tuner sorts the stations.

Moving a preset station

You can also move a specific preset station.

- 1 Follow steps 1 through 3 in "Organizing the Preset Stations" and select "MOVE PRESET" from the menu, then press ENTER.
- 2 Turn TUNING/SELECT so that the preset number you want to move appears in the display and press ENTER.
- 3 Turn TUNING/SELECT to select the new location for the preset number and press ENTER.
The preset station you selected is moved to the new location and the other preset stations shift backwards to make room for the new preset.

Example: If you move FM4 to FM 1.

Preset	FM1	FM2	FM3	FM4	FM5	FM6	FM7	FM8
Frequency	89.5	94.5	96.5	98.0	100.5	103.0	104.5	106.0

Preset	FM1	FM2	FM3	FM4	FM5	FM6	FM7	FM8
Frequency	98.0	89.5	94.5	96.5	100.5	103.0	104.5	106.0

Erasing preset stations

You can erase preset stations one by one.

- 1 Follow steps 1 through 3 in "Organizing the Preset Stations" and select "ERASE PRESET" from the menu, then press ENTER.
- 2 Turn TUNING/SELECT so that the preset number you want to erase appears in the display and press ENTER.
The preset station you selected is erased from the preset memory and the other preset stations shift forward to fill in the blank space.

Example: If you erase FM1.

Preset	FM1	FM2	FM3	FM4	FM5	FM6	FM7	FM8
Frequency	89.5	94.5	96.5	98.0	100.5	103.0	104.5	106.0

Preset	FM1	FM2	FM3	FM4	FM5	FM6	FM7	FM8
Frequency	94.5	96.5	98.0	100.5	103.0	104.5	106.0	

If you want to reset the preset stations to the factory preset setting

Turn off the tuner. Then, turn on the tuner again while holding down both ENTER and DAB.
All the settings of the tuner are reset to the factory preset setting.

Using the Radio Data System (FM RDS)

What you can do with RDS

The Radio Data System (RDS) is a broadcasting service that allows radio stations to send additional information along with the regular radio programme signal. This tuner offers you three convenient RDS features: Displaying the RDS information; Monitoring traffic, news, or weather information programmes; and Locating a station by programme type. RDS is available only on FM stations.*

Note

RDS may not work properly if the station you tuned to is not transmitting the RDS signal properly or if the signal strength is weak.

* Not all FM stations provide RDS service, nor do they provide the same types of services. If you are not familiar with the RDS system, check with your local radio stations for details on RDS services in your area.

Receiving RDS broadcasts

Simply select a station from the FM band. When you tune in a station that provides RDS services, the RDS indicator and the station name appears in the display.

Notes

- If there is an emergency announcement by governmental authorities, "ALARM" flashes in the display.
- If a station is not providing a particular RDS service, "NO..." (such as "NO PTY") appears in the display.

Monitoring traffic, news, or weather information programmes (RDS EON/DAB Announcement)

Enhanced Other Networks (EON) and DAB announcement allows the tuner to automatically switch to a station broadcasting traffic, news, or weather information. After the programme ends, the tuner switches back to the station you were listening to. To use this function, be sure to store the stations beforehand.

1 Tune to a preset DAB or FM RDS station so that the RDS TP or EON indicators light in the display.

2 Press EON so that the programme you want to monitor appears in the display. Each time you press EON, the display changes as follows:

TA → NEWS → WEATHER → TA & NEWS → TA & WEATHER → NEWS & WEATHER → TA & NEWS & WEATHER → OFF

When the tuner automatically tunes in a traffic, news or weather information programme, the respective indicator flashes. If you do not want to listen to the entire programme, press EON to switch back to the original station.

To stop monitoring the programme

Press EON while the tuner is in the respective EON standby mode and the indicator goes off.

You can monitor traffic, news or weather information using the remote

Press TA (traffic), NEWS, WEATHER so that the corresponding indicator appears in the display. To stop monitoring, press the button again.

Notes

- "Weak Signal" appears when the selected station has a weak signal. "Retune" appears when the tuner is trying to retune a station with a weak signal.
- Turn off the EON feature when you want to record a programme without interruptions, especially when you want to do timer recording.
- "No EON" appears in the display if you select an EON programme before tuning to an RDS station.

Locating a station by programme type (PTY)

When you receive preset DAB or FM RDS station, you can locate a station you want by selecting a programme type. The tuner tunes in the type of programmes currently being broadcast from the DAB or FM RDS stations stored in the tuner's preset memory.

1 Press DAB, FM or AM for the desired type of broadcast.

2 Press PTY.

3 Turn TUNING/SELECT to select the programme type you want. See the following table for the programme types you can select.

Programme type	What you hear
Alarm Test	Used only for dynamic switching
Alarm - Alarm!	Emergency broadcasts
Children's Progs	Programmes for the young
Country Music	Country music programmes
Cultures	Programmes about national or regional culture, such as language and social concerns

Programme type	What you hear
Current Affairs	Topical programmes that expand on current news
Documentary	Investigative features
Drama	Radio plays and serials
Easy Listening	Easy Listening (middle of the road music)
Education	Educational programmes, such as "how-to" and advice programmes
Finance	Stock market reports and trading, etc.
Folk Music	Folk music programmes
Information	Programmes offering information on a wide spectrum of subjects, including consumer affairs and medical advice
Jazz Music	Jazz programmes
Leisure & Hobby	Programmes on recreational activities such as gardening, fishing, cooking, etc.
Light Classics M	Classical music, such as instrumental, vocal, and choral works
National Music	Programmes featuring the popular music of the country or region
News	News programmes
None PTY	No programme type or undefined
Oldies Music	Programmes featuring oldies music
Other Music	Music that does not fit into any of the above categories, such as Rhythm & Blues and Reggae
Phone In	Programmes where members of the public express their views by phone or in a public forum
Pop Music	Popular music programmes
Religion	Programmes of religious content
Rock Music	Rock music programmes
Science	Programmes about the natural sciences and technology
Serious Classics	Performances of major orchestras, chamber music, opera, etc.
Social Affairs	Programmes about people and the things that affect them
Sport	Sports programmes

Programme type	What you hear
Traffic	Traffic announcements programmes
Travel & Touring	Programmes about travel. Not for announcements that are located by IT/TA
Varied Speech	Other types of programmes such as, celebrity interviews, panel games, and comedy
Weather & Metr	Weather information

- 4 Press ENTER.
The tuner starts searching the preset stations for the programme ("PTY Search" and the programme type are displayed).
When the tuner finds the programme you are looking for, it stops searching.

- 5 When you want to receive the same type of programme of other stations, repeat steps 2 to 4.

- You can locate a station by programme type using the remote
Press PTY +/- to select the desired programme in step 2 above, then press ENTER.

Notes

- When you do not preset any DAB or FM station, you cannot use the PTY function.
- If you do not perform any operation for 20 seconds after performing step 3, the tuner returns to the status before you press PTY. To resume the operation, perform from step 2 again.

Using the Digital Filter

When receiving DAB programmes, you can use the digital filter to match your listening environment and the music source.

- 1 Press MENU.
- 2 Turn TUNING/SELECT so that "DIGITAL FILTER" appears.
- 3 Press ENTER.
- 4 Turn TUNING/SELECT to select the desired filter.
"std" indicates that the filter is currently selected.
- 5 Press ENTER.
The selected filter is set to on.

Characteristics of each digital filter

The contents and characteristics of the digital filters are as follows:

- STD: Standard (Sharp roll-off):** provides a wide frequency range and spatial feeling, as it holds the most information among the four filters.
Suitable for classical music.
- Type1: CLEAR (slow roll-off):** provides smooth and powerful sound with clear image position.
Suitable for jazz band performances and jazz vocals.
- Type2: PLAIN (slow roll-off):** provides fresh and energetic sound with rich vocal expression.
Suitable for vocal performances.
- Type3: FINE (slow roll-off):** provides well-balanced natural sound, with a large scale feel and rich reverberation.
Suitable for listening to any kind of music when you are relaxed.

- You can also use the digital filter using the remote
Press DIGITAL FILTER on the remote.
Each time you press DIGITAL FILTER, the digital filter changes in the order as follows:

STD → Type1 → Type2 → Type3

Using the Display

DISPLAY MODE

Display Information

You can check the status of this tuner and the information about the programme using the display.

- When you tune in the DAB station
Each time you press DISPLAY, the display changes as follows:

- 1) Only when you tune in the secondary component. In this case, the normal display is set to component label.

- When "SC" appears in the display
You can tune in the secondary component. For details, see page 11.

- When "STEREO" appears in the display
The current programme is broadcasted in the stereo/joint (intensity) stereo mode.

When you tune in the FM or AM station
Each time you press DISPLAY, the display changes as follows:

- 2) Only when you tune in a FM RDS station

Customizing the display

You can select the appearance of the display from one of the following four display modes.

Press DISPLAY MODE.
Each time you press DISPLAY MODE, the display changes as follows:

Full Display/Full Brightness → Full Display/Dimmed → Minimal Display/Full Brightness → Minimal Display/Dimmed

The setting remains in effect until you change it again.
If you press one of the buttons on this unit, the minimal display changes to the full display with the selected brightness. After about 4 seconds, the display returns to the display mode you selected.

About the Menu Entry System

This tuner uses a menu entry system which allows you to operate various functions by following messages on the display. Use the following controls for menu operation.

Use the	To
MENU button	enter the menu mode.
TUNING/SELECT control	display different items or settings.
ENTER button	select the currently displayed item or setting.

Switching the remote mode of this tuner

By switching the remote mode of this tuner, you can control some functions of this tuner from the remote for other equipment such as Sony tuner or amplifier.

- 1 Press MENU.
- 2 Turn TUNING/SELECT to display "COMMAND MODE to Expand".
- 3 Press ENTER.

To return the remote mode for the supplied remote only
Choose "COMMAND MODE to Exclusive" in step 2 above.

Notes

- Regardless of the remote mode, you can control all functions of this tuner using the supplied remote.
- Though you switch the remote mode to "EXPAND", you cannot control some functions of this tuner without the supplied remote.

Tips for Better FM Reception

This tuner has various functions designed for better FM reception. First, try to receive stations with the standard settings. If the reception is not good, try altering the reception quality to obtain a clear signal. The tuner stores the following adjustments, together with the frequency when you make a station preset.

Finding the best aerial attenuator

You can lower the level of the input signal to receive broadcasts with extremely high signal levels.

- 1 Press MENU.
- 2 Turn TUNING/SELECT to display "ANTENNA ATTENUAT to ON".
- 3 Press ENTER.

When you turn off the antenna attenuator

Choose "ANTENNA ATTENUAT to OFF" in step 2 above.

Finding a best intermediate frequency band width

You can improve the selectivity and reduce interference to make broadcasts with weak signals easier to listen to.

- 1 Press MENU.
- 2 Turn TUNING/SELECT to display "IF BAND WIDTH to NARROW".
- 3 Press ENTER.

To tune in only the stations with high sound quality and low distortion

Choose "IF BAND WIDTH to WIDE" in step 2 above.

If an FM stereo programme is distorted

Press MONO/SC to change to monaural (MONO). You will not have the stereo effect but the distortion will be reduced. To return to stereo mode, press this button again.

SECTION 2 TEST MODE

1. Display Tube Check and KEY Check mode

1. Turn OFF the power.
2. While pressing **[DISPLAY]** and **[MENU]** together, turn ON **[POWER]** .
3. Display tube all lit.

4. Each time the button is pressed, the key number is counted down. After all the 14 buttons are pressed, "OK" appears. When the **[DAB]**, **[FM]** or **[AM]** button is pressed only, the following display appears.

DAB	RDS TA
FM	A B C D E F G H
AM	RDS TA NEWS WEATHER EON STEREO DIGITAL FILTER STD AUTO PRESET MEMORY NARROW ANT ATT MUTING MONO TUNED DATA SC ORC DAB FM AM

5. The two eighth notes are moved from the left to the right by turning the **[TUNING/SELECT]** dial clockwise. The notes are moved from the right to the left by turning the dial counterclockwise.

2. Entering the Factory Preset (In case perform just to write memory of the Factory Preset.)

1. Turn OFF the power.
2. While pressing **[ENTER]** and **[DAB]** together, turn ON **[POWER]** .

3. Microprocessor Version Display Mode

1. Turn off the power.
2. While pressing **[MENU]** and **[AM]** together, turn ON **[POWER]** .
3. The version and the date of the microprocessor are displayed.
4. Press the **[ENTER]** button to end this mode.

• **Audio information display (DAB only)**

Press **[DISPLAY]** and **[ENTER]** at the same time under the DAB tuned condition.
Audio information for service that is selected at present is displayed.

- ①: Bit rate
- ②: Audio contents
 - stereo = stereo broadcast
 - joint = joint stereo broadcast
 - dual = dual channel broadcast
 - single = single channel broadcast
 - stream = stream data broadcast
 - FIDC = FIDC data broadcast
 - Packet = packet data broadcast
- ③: Sampling frequency
- ④: Protection level
- ⑤: Transmission mode

• **DAB error rate display**

Press **[DAB]** and **[CHARACTER]** at the same time under the DAB tuned condition. (When the software version is 1.04, press **[DAB]** ten times while **[CHARACTER]** is kept pressed.)
The bit error rate is displayed.

- ①: PIC error rate
- ②: MSC error rate
- ③: Bit rate
- ④: In case of audio service
 - F : 48 kHz sampling
 - H : 24 kHz samplingIn case of data service
 - S : stream data
 - F : FIDC
 - P : pocket data
- ⑤: DAB decoder status information
 - Check the contents in binary notation.
 - Bit 7 : not used
 - Bit 6 : 1 when AFC is converged.
 - Bits 5 to 3 : The number of CRC errors during MPEG decode
 - Bit 2 : 1 when initial pulling-in is complete.
 - Bits 1, 0 : Contents of DAB frame length judgment

Bit 1	Bit 0	Frame length
0	1	96 ms
0	0	48 ms
1	0	24 ms
1	1	Judgment impossible

SECTION 3 ELECTRICAL ADJUSTMENTS

All the settings are performed in the Factory Preset state. (Refer to page 13.)

Precautions in Repairing

If the front end unit fails, it is difficult to repair the inner circuits, so replace the entire front end unit.

- Standard Setting of FM Stereo RF Signal Generator.

STEREO STANDARD SIGNAL	MONAURAL STANDARD SIGNAL
Carrier frequency : 98MHz Modulation : Audio 1kHz Main channel (L+R) : 33.75kHz deviation Sub channel (L-R) : 33.75kHz deviation Pilot : 7.5kHz Deviation	Carrier frequency : 98MHz Modulation : Audio 1kHz 75kHz deviation

FM Discriminator ADJUSTMENT (NULL and MONO Distortion Adjustment)

Setting:

Modulation : Monaural Standard signal
Output level : 6mV (76dB) (at 75 Ω open)

Procedure:

- Tune the set to 98 MHz.
- Adjust IFT202 for 0V reading on the digital voltmeter.
..... NULL
- Adjust IFT203 for a minimum reading on the distortion meter.
..... MONO Distortion (THD)
- Repeat the adjustments of 2 and 3 several times.

Note : When replacing the ceramic filter, perform this alignment.

Stereo and Tuned Level Adjustment

Setting:

Modulation : Stereo Standard signal
Output level : 18μV (25dB) (at 75 Ω open)

Procedure:

- 1. Tune the set to 98 MHz.
- 2. Adjust RV203 to the point (moment) when the “STEREO” and “TUNED” indicators will change from going off to going on.

FM Signal Level Adjustment

Setting:

Modulation : Stereo Standard signal
Output level : 3mV (76dB) (at 75 Ω open)

Procedure:

- 1. Tune the set to 98 MHz.
- 2. Press **[DISPLAY]** button to display the digital signal, then adjust RV202 to be display as “Signal 70dB”.

Stereo Separation Adjustment

Setting:

Modulation : Stereo Standard signal
Output level : 6mV (76dB) (at 75 Ω open)

Procedure:

FM stereo Signal generator Output channel	Level meter connection	Level meter reading (dB)
L-CH	L-CH	Ⓐ
R-CH	L-CH	Ⓑ [Ⓐ] Adjust RV301 for minimum reading on Level meter
R-CH	R-CH	Ⓒ
L-CH	R-CH	Ⓓ [Ⓒ] Adjust RV301 for minimum reading on Level meter

L-CH Stereo separation : Ⓐ – Ⓑ

R-CH Stereo separation : Ⓒ – Ⓓ

The separations of both channels should be equal.

AM SECTION

AM Tuned Level Adjustment

Setting:

Procedure:

1. Set AM RF signal generator so that the AM antenna input level becomes 74dB $\mu\text{V/m}$.
2. Adjust the position of RV201 so that "TUNED" lights.

Adjustment Location

[MAIN BOARD] — Component Side —

SECTION 4 DIAGRAMS

4-1. BLOCK DIAGRAM

4-2. CIRCUIT BOARDS LOCATION

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.
(In addition to this, the necessary note is printed in each block.)

For schematic diagrams.

Note:

- All capacitors are in μF unless otherwise noted. pF : μF 50 WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $\frac{1}{4}\text{W}$ or less unless otherwise specified.
- $\triangle$: internal component.
- $\square$: panel designation

Note:

The components identified by mark $\triangle$ or dotted line with mark $\triangle$ are critical for safety.
Replace only with part number specified.

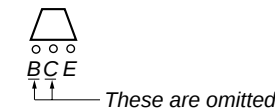

- $\text{B}+$: B+ Line.
- $\text{B}-$: B- Line.
- Voltages and waveforms are dc with respect to ground under no-signal (detuned) conditions.
no mark : FM
() : MW
< > : LW
* : Impossible to measure
- Voltages are taken with a VOM (Input impedance 10 $\text{M}\Omega$).
Voltage variations may be noted due to normal production tolerances.
- Waveforms are taken with an oscilloscope.
Voltage variations may be noted due to normal production tolerances.
- Circled numbers refer to waveforms.
- Signal path.
 $\Rightarrow$: FM
 $\Rightarrow$: AM

For printed wiring boards.

Note:

- $\circ$: parts extracted from the component side.
- $\square$: Pattern from the side which enables seeing.

4-12. IC PIN FUNCTION DESCRIPTION

IC104 MN66710 DAB DECODER (MAIN BOARD)

Pin No.	Pin Name	I/O	Description
1	MPUSYNC	O	Microprocessor operation reference signal
2	NPADRDY	O	PAD data ready signal
3	MPUCLK	I	Microprocessor I/F data clock input
4	MPURX	I	Microprocessor I/F received data input
5	MPUTX	O	Microprocessor I/F send data output
6	MPUMOD	I	Microprocessor I/F mode
7	TEST0	I	Test mode setting
8	TEST1	I	Test mode setting
9	TEST2	I	Test mode setting
10	TEST3	I	Test mode setting
11	NRST	I	Master reset input
12	Vss0	—	Digital Vss
13	Vdd0	—	Digital Vdd
14	MCLK24	I	Master clock (23.576 MHz) input
15	MCLK0	O	Output of master clock oscillator circuit
16	DAOUT	O	SPDIF digital audio I/F output
17	AUXDAT	I	Audio ADC serial data input
18	SMCK	O	Audio AD/DA master clock
19	SLRCK	O	Audio AD/DA LR clock
20	SCLK	O	Audio AD/DA serial clock output
21	SDAT	O	Audio DAC serial data output
22	RDIU0	O	Auxiliary output for RD expansion
23	RDIU1	O	Auxiliary output for RD expansion
24	RDIU2	O	Auxiliary output for RD expansion
25	RDIIN	I	RD1 input
26	RDIU3	O	Auxiliary output for RD expansion
27	RDIU4	O	Auxiliary output for RD expansion
28	RDIU5	I	Auxiliary input for RD expansion
29	RDIOUT	O	RD1 output
30	Vss1	—	Digital Vss
31	Vdd1	—	Digital Vdd
32	FD3EN	I	General purpose data output enable
33	FW4	O	General purpose data output window 4
34	FW3	O	General purpose data output window 3
35	FW2	O	General purpose data output window 2
36	FW1	O	General purpose data output window 1
37	FWFIC	O	General purpose data output window 0
38	FCLK3	O	General purpose data output clock
39	FERF3	O	General purpose data output error flag
40	FDAT3	O	General purpose data output data
41	RAD4	O	External DRAM address bit 4
42	RAD5	O	External DRAM address bit 5
43	RAD6	O	External DRAM address bit 6
44	RAD3	O	External DRAM address bit 3
45	RAD2	O	External DRAM address bit 2
46	RAD1	O	External DRAM address bit 1
47	RAD0	O	External DRAM address bit 0
48	Vss2	—	Digital Vss
49	Vdd2	—	Digital Vdd
50	RAD7	O	External DRAM address bit 7

Pin No.	Pin Name	I/O	Description
51	RAD8	O	External DRAM address bit 8
52	NRAMOE	O	External DRAM output enable
53	NRCAS	O	External DRAM column address strobe
54	RAD9	O	External DRAM address bit 9
55	NRRAS	O	External DRAM row address strobe
56	NRAMWE	O	External DRAM write enable
57	RDT1	I/O	External DRAM data bit 1
58	RDT0	I/O	External DRAM data bit 0
59	RDT2	I/O	External DRAM data bit 2
60	RDT3	I/O	External DRAM data bit 3
61	Vss3	—	Digital Vss
62	DSPMON0	O	DSP monitor output bit 0
63	DSPMON1	O	DSP monitor output bit 1
64	DSPMON2	O	DSP monitor output bit 2
65	DSPMON3	O	DSP monitor output bit 3
66	DSPMON4	O	DSP monitor output bit 4
67	DSPMON5	O	DSP monitor output bit 5
68	DSPMON6	O	DSP monitor output bit 6
69	DSPMNEN	I	DSP monitor output enable
70	CIRSYN	O	Sync signal output for CIR display
71	CTLLR	O	AFC/CIR DAC LR clock
72	CTLCLK	O	AFC/CIR DAC clock
73	CTLDAT	O	AFC/CIR DAC data
74	Vss4	—	Digital Vss
75	Vdd3	—	Digital Vdd
76	FSY0	O	Frame sync signal output
77	NULDET	I	NULL symbol detected signal input
78	AVss	A	Analog Vss
79	ADVRB	A	ADC bottom-side reference voltage
80	ADIN	A	ADC analog input
81	ADVRT	A	ADC top-side reference voltage
82	AVdd	A	Analog Vdd
83	VREF	—	Reference power supply for 5 V input pad
84	IQMOD	I	Digital IQ generation selector input

IC601 HD6432237 SYSTEM CONTROL (MAIN BOARD)

Pin No.	Pin Name	I/O	Description
1 – 14	N.C	—	Input output terminal - not used
15	Vcc	—	Power supply terminal (+3.3 V)
16	N.C	—	Input output terminal - not used
17	Vss	—	Ground terminal
18 – 28	N.C	—	Input output terminal - not used
29	SDA	I/O	Data input output terminal for EEPROM (HN58X2432)
30	SCL	O	Clock output terminal for EEPROM (HN58X2432)
31	DP-SDA	I/O	Data output terminal to DAM front end
32	DP-SCL	O	Clock output terminal to DAM front end
33	GND	—	Ground terminal
34	AP-DI	O	Data output terminal to FM/AM PLL IC (IC72130)
35	AP-DO	I	Data input terminal from FM/AM PLL IC (IC72130)
36	AP-CL	O	Clock output terminal to FM/AM PLL IC (IC72130)
37	AP-CE	O	Enable terminal to FM/AM PLL IC (IC72130)
38 – 44	N.C	—	Input output terminal - not used
45	GND	—	Ground terminal
46	A-STP	I	Auto stop detection signal input terminal
47	STEREO	I	Stereo detection signal input terminal
48 – 49	N.C	—	Input terminal - not used
50	SIRCS	I	CIRCS signal input terminal
51	GND	—	Input terminal - ground
52	SIGNAL	I	Signal level detection terminal
53	KEY1	I	Key control 1
54	KEY2	I	Key control 2
55	KEY3	I	Key control 3
56	VREF	—	Reference voltage input terminal (+3.3 V)
57	AVcc	—	Power supply terminal (+3.3 V)
58, 59	N.C	—	Mode terminal (fixed at +3.3 V)
60	OSC2	—	Sub-clock input - open
61	OSC1	—	Sub-clock input - fixed at +3.3 V
62	RESET	I	System reset input terminal
63	POWER	I	AC OFF detection input terminal
64	STBY	—	Standby terminal - fixed at +3.3 V
65	Vcc	—	Power supply terminal (+3.3 V)
66	XTAL	—	Master clock (10 MHz)
67	Vss	—	Ground terminal
68	EXTAL	—	Master clock (10 MHz)
69	N.C	—	Not used - fixed at ground
70	N.C	—	Mode terminal (fixed at +3.3 V)
71	N.C	—	Not used - fixed at ground
72	AFMUTE	O	Mute control output terminal
73	DF-DA	O	Data output terminal for D/F (CXD8762) control
74	DF-CL	O	Clock output terminal for D/F (CXD8762) control
75	DF-CE	O	Enable output terminal for D/F (CXD8762) control
76	DA-RST	O	Reset output terminal to D/F (CXD8762)
77	DA-MUTE	O	Terminal for D/F (CXD8762) mute control
78	FL-RST	O	Reset output terminal to fluorescence display tube drive IC (MSM9202)
79	FL-DA	O	Data output terminal to fluorescence display tube drive IC (MSM9202)
80	N.C	—	Input terminal - fixed at ground

Pin No.	Pin Name	I/O	Description
81	FL-CL	O	Clock output terminal to fluorescence display tube drive IC (MSM9202)
82	FL-ENB1	O	Enable output terminal 1 to fluorescence display tube drive IC (MSM9202)
83	FL-ENB2	O	Enable output terminal 1 to fluorescence display tube drive IC (MSM9202)
84	RD-CL	I	Clock output terminal from RDS demodulation IC (BU1924F)
85	RD-DO	I	Data input terminal from RDS demodulation IC (BU1924F)
86	MPURX	O	Data output terminal to DAB decode IC (MN66710)
87	MPUTX	I	Data input terminal to DAB decode IC (MN66710)
88	MPUCLK	O	Clock output terminal to DAB decode IC (MN66710)
89	MPUMOD	O	Mode select output terminal to DAB decode IC (MN66710)
90	NRST	O	Reset output terminal to DAB decode IC (MN66710)
91 – 93	N.C	—	Output terminal - fixed at ground
94	MPUSYNC	I	Microprocessing operation reference signal input terminal from DAB decode IC (MN66710) (24 ms cycle)
95	MPADRDY	I	Interruption signal for PAD data reading DAB decode IC (MN66710)
96	DAB/FM	O	DAB/FM and AM power supply switching terminal (DAB function at H)
97	TEST	O	Test terminal (display check mode at L)
98 – 100	N.C	—	Output terminal - open

SECTION 5 EXPLODED VIEWS

NOTE:

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.
- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

The components identified by mark △ or dotted line with mark △ are critical for safety. Replace only with part number specified.

AC SW **DISPLAY**

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked “*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- CAPACITORS:
uF: μ F
- RESISTORS
All resistors are in ohms.
METAL: metal-film resistor
METAL OXIDE: Metal Oxide-film resistor
F: nonflammable
- COILS
uH: μ H

The components identified by mark  or dotted line with mark  are critical for safety. Replace only with part number specified.
