Using the Digital Sound Effects

This unit incorporates a Digital Signal Processing (DSP) system which consists of a Digital Parametric Equalizer, a Digital Presence Surround Processor, and a Digital Dynamic Sound Controller. Using this DSP system, you can get the optimum sound for the kind of music you want to listen to.

Twelve recommended sound field programs (Digital Sound Menu) are preset at the factory for easy use. You can enjoy the digital sound effects by just choosing from the Digital Sound Menu according to the program source.

You can also create a variety of different sounds and effects by adjusting the Digital Sound Menu settings using three different sound manipulation functions.

Making full use of the DSP system allows you to maximize your music listening enjoyment.

You can also store up to six settings you have created in the memory (Personal File).

How to get the Digital Sound Effect

To adjust each of the Digital Sound Effect, you must activate the DSP system first.

Press DSP.

When the DSP is working, one of the 12 Digital Sound Menus (page 74) or one of the six Personal Files (page 86) displays in the display window.

To cancel the DSP effect

Press DSP again.

The Digital Sound Menu or the Personal File disappears and the display shows "EFFECT OFF."

Using the Digital Sound Effects

Enjoying the Digital Sound Menu

When the system is shipped from the factory, 12 specially recommended combinations of settings for the Parametric Equalizer, Presence Surround and Dynamic Sound (Digital Sound Menu) are stored. Since these programs are appropriate for most types of music and listening situations, you can enjoy the digital sound effects by just choosing from the Digital Sound Menu according to the program source.

Before you start

If "EFFECT OFF" is displayed, press DSP to activate the DSP system.

1 Press PRESET.

The display shows a "menu display" (choices) of the Digital Sound Menu.

2 Select the Digital Sound Menu using CURSOR CONTROL and by referring to the table on page 76.

The selected Digital Sound Menu displays and the sound effect starts two seconds after releasing the CURSOR CONTROL buttons. Then, the display goes back to its normal state (see page 78).

To display the next or previous menu

Press **a** or **b**.
Press **▲** or **▼**.

To move the cursor

Press **◀** or **▶**.

To select the Digital Sound Menu directly (Possible with the remote commander only)

- 1 Press DSP on the remote commander so that "DSP" appears on the display on the remote commander.
- 2 Press the numeric button **A** for the desired Digital Sound Menu.

Changing the Display

(Not possible with the remote commander)

Each time you press DISPLAY, the display changes in the following order:

- Spectrum analyzer 1
- Spectrum analyzer 2
- Digital Sound Menu Display

Note:

When the DSP system is not on, the display shows "EFFECT OFF" instead of the selected Digital Sound Menu.

To make the display move with the music **A** (Not possible with the remote commander)

You can make the picture in the display move to the rhythm of the music as an animation. The picture moves quickly when the music is fast, slowly when the music is slow, and stops when the music stops. You can enjoy this effect along with any sound effect available with this unit.

Press **BALANCE** and **DISPLAY** at the same time.

The picture that represents the selected Digital Sound Menu starts moving. Each Digital Sound Menu has a different picture for this effect.

The illustration **A** shows an example of this effect when the Digital Sound Menu "CAR" is selected. There is also a picture for when the DSP system is not active.

To exit this mode
Press **DISPLAY**.

Using the Digital Sound Effects

Using the Digital Parametric Equalizer

This function allows you to adjust the sound by raising and lowering the levels of specific frequency ranges.

Before you start

If "EFFECT OFF" is displayed, press DSP to activate the DSP system.

1 Select the Digital Sound Menu (See page 74.)

2 Select the frequency range you wish to adjust by pressing **PARAMETRIC EQUALIZER**. (P.EQ on the remote commander)

Each time you press it, the frequency range in the Equalizer display changes as follows:

PEQ 1 → PEQ 2 → PEQ 3

Display	Frequency range
PEQ 1	Low range
PEQ 2	Middle range
PEQ 3	High range

When the unit is shipped from the factory, each of the three frequency positions is defined for a specific frequency range as shown in the above table.

The adjustable frequency range can be freely moved from left to right (low → high) along the frequency scale as explained in the next step. This allows each of the frequencies (PEQ 1 – 3) to be used for any frequency range. For example, PEQ 1 does not have to be used to adjust a low-frequency range, but can be used instead to adjust a mid- or high-frequency range by moving it to the right along the scale.

3 Adjust the sound using **CURSOR CONTROL**.

a ◀ or ▶: Shifts the frequency range to be adjusted to the left or to the right.

b ▲ or ▼: Raises or lowers the level of the frequency range centering around the flashing dot.

4 If you wish to adjust the level of another frequency range, repeat steps 2 and 3.

The "Equalizer display" disappears about 10 seconds after you adjust the sound.

Confirming the effect of the adjustment
Display the "Equalizer display" by pressing **PARAMETRIC EQUALIZER** and then press **ON/OFF**. "±0 dB" displays and the equalizer curve becomes flat.

Each time you press **ON/OFF**, the sound switches back and forth between the adjusted settings and a flat curve, allowing you to hear and compare the difference.

Using the Digital Sound Effects

Using the Digital Presence Surround Effects

The surround function allows you to adjust the length of the reverberation time and the level of the reverberated sound, putting you in control of a wide range of effects and sounds.

The surround effect adjustments should usually be set to match the size of the envisaged concert hall.

When you want to create the atmosphere of a small hall such as a live house or club, shorten the reverberation time.

When you want to create the atmosphere of a large hall such as a concert hall, lengthen the reverberation time.

If you want to add the feeling of being in a "live" hall where there is a lot of echo, increase the level (strength) of the reverberated sound. If you want to add the feeling of being in a "dead" hall where there is little echo, decrease the level of the reverberated sound.

- Before you start**
If "EFFECT OFF" is displayed, press DSP to activate the DSP system.
- 1 Select the Digital Sound Menu. (See page 74.)
 - 2 Press PRESENCE SURROUND. (SURROUND on the remote commander)
The "Surround display" appears.
 - 3 Adjust the sound using CURSOR CONTROL.
 - A To change the reverberation time (B)
To shorten the reverberation time, press ◀.
To lengthen the reverberation time, press ▶.
 - B To change the level of the reverberated sound (B)
To increase the level, press ▲.
To decrease the level, press ▼.

The "Surround display" disappears about 10 seconds after you adjust the sound.

Confirming the effect of the adjustment
Display the "Surround display" by pressing PRESENCE SURROUND and then press ON/OFF. "---- dB" displays. Each time you press ON/OFF, the sound switches back and forth between the adjusted settings and no surround effect, allowing you to hear and compare the difference.

Using the Digital Sound Effects

Adjusting the Digital Dynamic Sound Controller

This unit allows you to select either of the two Dynamic Controls, Compressor (CP) or Noise Gate (NG).

The compressor compresses the dynamic range of the output signal to increase the average output level without distortion. This function is useful for obtaining dynamic sound at a small output level or when recording a program source with a wide dynamic range, such as a compact disc or a cassette tape.

On the other hand, the Noise Gate limits the dynamic range of the input signal to eliminate undesired noise between tunes, etc.

You can set the Compressor or Noise Gate effect in seven increments: "CP.1" to "CP.4" - "NG.1" to "NG.3". The higher the number selected, the stronger the effect.

When the dynamic sound controller is set to "NORM," there is no special effect.

- Before you start**
If "EFFECT OFF" is displayed, press DSP to activate the DSP system.
- 1 Select the Digital Sound Menu. (See page 74.)
 - 2 Press DYNAMIC SOUND. (DDS on the remote commander)
The "Dynamic Sound display" appears.
 - 3 Select the Compressor or Noise Gate using CURSOR CONTROL.

The "Dynamic Sound display" disappears about 10 seconds after adjusting the sound.

Confirming the effect of the adjustment
Display the "Dynamic Sound display" by pressing DYNAMIC SOUND and then press ON/OFF. "NORM" displays. Each time you press ON/OFF, the sound switches back and forth between the adjusted settings and no Dynamic Sound effect, allowing you to hear and compare the difference.

Storing the Volume Setting for Timer-Activated Operation Wake Up Volume

The volume setting is called up automatically when the power is turned on for timer-activated operation (page 128). This is convenient for when you want to wake up to music, etc. You can also use the Sleep Timer function (page 136) together with this function to listen to music in a low volume when you go to sleep, and in a high volume when you wake up.

- 1 Adjust the VOLUME.
- 2 Keep WAKE UP depressed until "WAKE UP MEMORY" appears on the display.
The WAKE UP indicator lights up.

When you do not want to use the Wake Up Volume
Press WAKE UP so that the WAKE UP indicator goes off.

To activate the Wake Up Volume again
Press WAKE UP again.

Storing Your Individual Sound Effect Settings - Personal File

- By storing your individual sound effect settings in the Personal File, you can easily call up the settings at any desired time. You can store up to six combinations of settings.
- Before you start**
If "EFFECT OFF" is displayed, press DSP to activate the DSP system.
- 1 Obtain the desired sound effect. (See page 80, 82, 84)
 - 2 Press MEMORY.
"MEMORY menu display" (MEMORY and the letters A to F) appear on the display.
 - 3 Select a letter (A through F) using CURSOR CONTROL.
 - 4 Press MEMORY while the "MEMORY menu display" is displayed.

The Equalizer Curve, Presence Surround and Dynamic Sound settings are saved under the selected letter. The selected Personal File name appears on the display. The settings previously stored at this memory location are erased and replaced by the new settings.

If you do not press MEMORY in step 4
The "MEMORY menu display" disappears after about 10 seconds. The adjusted sound effect settings is not saved.
